

ATTENZIONE INFORMAZIONE IMPORTANTE

Dear customers,

Lycan is high performance low friction wiper for general use and long live time “without” any oil film on stanchion tube surface (dry lube system)

Lycan Edge is the top of high performance low friction seal for racers or peoples who want the maximum performance, so the lowest friction and against wear need a small controlled lubrication! That's why a small oil film will be on stanchion tube surface! Please check your stanchion tube surface condition and bushing play regularly. Bad stanchion tube surface finishing, tubes wear and too much bushing play will cause leaking on **Lycan Edge**.

* Oil type and quantity: Please refer to the owner's manual of your fork and use recommended oil type and quantity

Cheers and Enjoy your maximum suspension performance!

An advertisement graphic for LYCAN Edge. At the top, the text 'LYCAN give you an Edge' is displayed in a stylized font. Below this, a paragraph of text describes the product's benefits: 'with patent PTFE edge lip design, Lycan Edge wiper minimizes the friction more than 50% from conventional design. It means your fork is more supple, your damping adjusting is more pronounced and precise. Giving you and Edge on your trail riding!'. To the left, a close-up shows an orange wiper ring installed on a silver stanchion tube. To the right, a line graph plots 'Friction' on the y-axis (ranging from 0.0 to 15.0) against 'Displacement' on the x-axis (ranging from 0 to 5). Two lines are shown: a green line for 'LYCAN - Gray' and an orange line for 'LYCAN Edge - Orange'. The orange line is significantly lower than the green line, indicating reduced friction. Below the graph, two orange wiper rings are shown: one whole and one broken to reveal its internal lip design. The Racing Bros logo is in the bottom left corner.
